Comments on the Ph.D Work:

The topic is of current relevance and has an important bearing in the area of acoustic wireless communications. Literature Survey has been precise and intensive. The candidate's research methodology is well organized and clear. Results of the research presented thus far has been satisfactory and also considering the Journal and conference publications on the topic, the undersigned committee opine that there is sufficient novelty for the candidate to continue pursuit of a PhD.

Suggestions for further Work:

The candidate has been suggested to examine

1. Effect of Multipath propagation and
2. Doppler compensation for multicarrier signals in underwater wireless transmission.
3. The committee recommends that the title be changed to 'Novel tone loading algorithm for Acoustic Communications'.

Recommendations:

The committee recommends that the candidate may continue the research work keeping the suggestions above in focus.

Progress Work Carried Out Till Now

Cleared 3 courses out of 4 course work subjects. Characterization of the FSPCM material for understanding the morphology and basic physical characteristics for heat storage. Developing experimental setup for determining heat storing capacity of the material.

Comments on the progress of research work done by the candidate so far

The candidate has shown good progress in his research work. He has characterised FSPCM using SEM, XRD, FTIR, DSC, EDAX, TGA, conceptualised and designed the experimental set-up for carrying out heat storing capacity evaluation of the developed FSPCM. The progress is satisfactory.
