## Five stage mechanized cleaning process:

### Stage-1: Mechanized dewatering

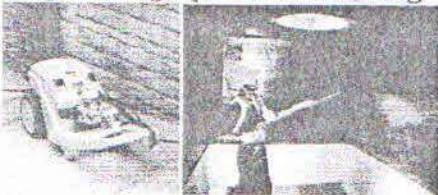

Water present in the tank is removed using high power dewatering pumps.

### Stage-2: Sludge removal

Sludge, sand and mud accumulated at the bottom of the tank are removed effectively using sludge-removal equipment.

### Stage-3: High pressure cleaning

High pressure water jet is used to clean all the sides and floor of the tank thoroughly so that even the slightest amount of dirt can be washed away.

### Stage-4: Vacuum cleaning

Surface of the tank is completely dried using vacuum and the dirty water is disposed off safely.

### Stage-5: UV Radiation

Ultra-violet rays are passed into the tank using a UV radiator in order to get rid of suspended or floating bacteria in the tank.

**THANK YOU**
